Pedalverriegelung: Erst durch Zurückdrücken des Sperrhebels mit dem Schuh wird das Pedal zur Betätigung freigegeben. So ist eine ungewollte Betätigung auch bei starken Erschütterungen durch unsachgemäße Handhabung ausgeschlossen./

Pedal lock: Only by pushing back the locking lever with the shoe is released the pedal to actuate. So an unwanted operation by strong vibrations through mishandling is excluded.

Devices

1: Free movement of the lever

The lever can be actuated without any particular device.

2: Movement of the lever dependent of the safety device notch

The pedal can be actuated only by lowering the safety lever fully inserting the foot, thus preventing any accidental actuation.

3: Device to maintain the lever in lowered position

By pushing the lever the contact switches and the lever remains locked in lowered position.

Push the locking device in order to unlock the pedal actuator.
Once you release the lever the contacts return to their initial position.

4: Free movement with two-stage actuating force

By applying a light pressure F1 on the lever, the first contact block will be actuated while the second keeps in state.
An higher pressure F2 on the lever will switch also the second contact block.

5: With safety device notch and two-stage actuating force

Same as above but the pedal can be actuated only by completely inserting the foot in the device.
